

NEW ERA OF PUBLIC SAFETY

A GUIDE TO FAIR, SAFE, AND EFFECTIVE
COMMUNITY POLICING

12

OFFICER HEALTH WELLBEING AND SAFETY

Police officers often respond to violent situations and crises, and many work in communities with high levels of gun violence and regularly bear witness to human tragedy. This puts them under great physical and mental stress, which can undermine their health and wellbeing and affect other parts of their lives. The toll on officers is reflected in the high rates of suicide, which is the leading cause of officer deaths in the line-of-duty.¹

These effects go beyond officers themselves; they also affect loved ones and family members — and entire communities. The Final Report of the President’s Task Force on 21st Century Policing notes that officer wellness has a direct impact on communities.² Officers who are equipped to handle stress at work and at home, it notes, are more likely to make better decisions on the job and have positive interactions with community members.³ As task force member Tracey Meares noted on the importance of officer wellbeing, “Hurt people can hurt people.”⁴ Officer health, wellbeing, and safety is, in short, an important officer and public safety issue.

RECOMMENDED BEST PRACTICES

12.1

This chapter outlines best practices in promoting and enhancing officer health, wellbeing, and safety. To take a holistic approach to health, wellbeing, and safety and support officers' spouses, partners, and families, departments should:

Create a culture that supports and promotes wellbeing.

12.2

Implement robust employee assistance programs.

12.3

Create peer support and mentoring programs.

12.4

Attend to and promote officer health and wellbeing.

12.5

Incorporate officer health, wellbeing, and safety into operations.

12.6

Establish post-crisis evaluation and treatment protocols.

12.7

Provide officers with appropriate equipment.

PHYSICAL AND MENTAL HEALTH

Police officers risk injury⁵ and regularly face a range of stressors, such as evaluating risk in dangerous situations, making quick decisions to stay safe and protect the public, and interacting with people in challenging and sometimes tragic circumstances. These stressors can have long-term, cumulative effects and put officers at higher risk for various physical and mental health problems.

The nature of police work affects officers' physical and mental health.⁶ Policing typically involves long sedentary periods interspersed with short bursts of physical activity and shift work (which often occurs outside traditional work hours and disrupts normal sleep cycles).⁷ These conditions contribute to job-related stress and anxiety, which are associated with obesity, insomnia, heart disease, stroke, and diabetes.⁸ Officers also experience higher rates of alcoholism — also often associated with job-related stress — which exacerbates other health problems.⁹

Because officers respond to confrontation, conflict, and violence, they are exposed to trauma and death. These traumatic experiences carry significant mental health risks, including suicide, which disproportionately affects police officers. An estimated 159 officers took their lives in 2018, making death by suicide more likely than death from firearms and traffic-related accidents combined.¹⁰ Officers are also more likely than the general population

to exhibit symptoms of post-traumatic stress disorder (PTSD),¹¹ which increases the risk of substance use disorders.¹²

These negative effects go beyond individual officers and departments. The physical and emotional stress of police work takes a toll on officers' family and home lives, contributing to divorce and intimate partner violence, which is associated with unresolved (*i.e.*, untreated) trauma, substance use, and burnout.¹³ Family members may also develop anxiety about officers' safety and wellbeing. For these reasons, department leaders should take a holistic approach to health and wellbeing and include support systems for spouses, partners, and family members.

Communities also suffer when officers aren't healthy and well. Fatigue impairs decision-making, and tired officers are more likely to escalate encounters with the public.¹⁴

Officers who are mentally and physically fit are more productive and receive fewer complaints regarding use of force.¹⁵ Improved mental health and emotional wellbeing, meanwhile, is associated with better outcomes in police encounters¹⁶ and supports other recommendations in this report, such as attracting and retaining a talented and diverse workforce. (For more detail, see Chapter 10.)

BEST PRACTICES IN OFFICER HEALTH WELLBEING AND SAFETY

Because officers face different risks and stressors depending on where they work, health and wellbeing initiatives vary by department. These programs sometimes incur costs relating to equipment, health care, data collection, and more. For this reason, leaders should incorporate officer health, wellbeing, and safety into departmental budgets, and they should take the specific needs of their staff into account when assessing how to best to promote it.

To take a holistic approach to health, wellbeing, and safety and support officers and their spouses, partners, and families, departments should:

RECOMMENDATION 12.1 CREATE A CULTURE THAT SUPPORTS AND PROMOTES WELLBEING.

To promote health and wellbeing and lessen stigma around treatment and care, leaders should integrate wellbeing principles into training, counseling, and intervention programs. Specifically, departments should strive to instill the value and importance of selfcare in all aspects of operations. To understand officers' needs, department leaders should seek out their input, conduct surveys, and visit roll calls both to promote department assistance programs and resources, and to destigmatize their use. In listening to officers' needs directly, departments will increase procedural justice, too.

RECOMMENDATION 12.2

IMPLEMENT ROBUST EMPLOYEE ASSISTANCE PROGRAMS.

Police departments need adequately staffed employee assistance programs (EAPs) to provide officers with the mental health services and support they need to ensure they can positively interact with communities and deliver fair, safe, and effective services.¹⁷ EAPs should offer low- or no-cost services, such as confidential counseling, crisis counseling, stress management counseling, and mental health evaluations,¹⁸ and they should provide access to mental health hotlines.¹⁹

To encourage use of these services, supervisors should promote them and trainers should publicize them in trainings.²⁰ Professional counselors should be trained in treating substance use disorders, PTSD, intimate partner violence, depression, and issues of particular concern to female officers.²¹ These services should also be available to officers' partners and families.²²

RECOMMENDATION 12.3

CREATE PEER SUPPORT AND MENTORING PROGRAMS.

Departments should provide peer counseling programs so officers can talk with other officers (*i.e.*, peers) who have experienced similar job stressors. Sometimes, officers are reluctant to seek help coping with stress and trauma because they perceive it as a sign of weakness. Peer support programs help officers who feel this way find validation from people they trust and respect.²³ These programs should complement other departmental supports, and peer counselors should help officers connect with other services.²⁴ Volunteer peer counselors should receive training in effective approaches to assist officers who show signs of stress.

Mentoring programs support the kind of long-term relationships that help officers navigate challenges in their personal and professional lives, such as PTSD and trauma, and help applicants during the hiring process and through the transition from community member to officer.²⁵ Volunteer mentors should be selected based on healthy personal and professional habits and/or because they have overcome challenges of their own. Officers should be able to request a mentor at any stage in their career and should be matched based on a confidential profile completed by both mentor and mentee.

The Indianapolis Metropolitan Police Department's mentoring program is cited by the U.S. Department of Justice as a model program. It provides peer support and facilitates officer wellness.²⁶ Supported by the department's Office of Professional Development and Wellness, the program conducts eight-hour wellness training on managing stress and trauma²⁷ for mentors.²⁸ In the program's first six years, officer disciplinary referrals dropped 40 percent.²⁹

RECOMMENDATION 12.4 ATTEND TO AND PROMOTE OFFICER HEALTH AND WELLBEING.

Mental and physical health are critical for all officers to meet the needs and demands of the job. When departments have the processes and resources in place, and promote wellbeing as a departmental value, they signal to officers that they are invested in their mental and physical health, as well as their safety. Specifically, departments should:

Address mental health. Officers frequently experience violence and the risk of violence, witness traumatic events, and come under heavy criticism, all of which can lead to isolation and job-related stress.³⁰ Thus, all new hires should be required to undergo a thorough psychological screening as part of the hiring process. Psychological screenings are designed to identify the kind of mental health problems and personality disorders that interfere with officer performance.³¹

Once on active duty, officers should receive periodic psychological screenings³² to monitor stress levels, biases, coping skills, and overall attitudes.³³ Supervisors should receive training on how to identify officers with particularly high stress levels or who are experiencing mental health crises and who may benefit from counseling or stress management training.³⁴

Officers who are involved in or witness traumatic events, such as an officer-involved shooting, a mass shooting, the death of a child, or a terror-based attack, should be required to speak with a counselor and should have the option of additional counseling. Additionally, department leaders should actively encourage members to use these services and clarify that they carry no adverse consequences.

Encourage good physical health. Numerous studies have found that investing in physical health programs reduces costs associated with heart disease and other related medical problems.³⁵ Thus, department leaders should promote and incentivize physical health by providing low- or no-cost gym access and rewards for performing well on annual physical exams.

Promote health and wellbeing in training. Health and wellbeing should be woven into all academy and in-service training, and mental health and other wellbeing experts should lead discussions on topics that apply to officers' professional **and** personal lives. Training in the use of force, for example, should address the stress of using and witnessing serious and lethal force; coping with public criticism (warranted or not); and support services available to officers.³⁶

Crisis response training teaches officers how to identify people in crisis or who are exhibiting dangerous behaviors. Officers can use these skills to recognize alarming behavior in coworkers, family members, and friends.³⁷

RECOMMENDATION 12.5 INCORPORATE OFFICER HEALTH, WELLBEING, AND SAFETY INTO OPERATIONS.

Officer health, wellbeing, and safety should be integrated into all facets of operations. Specifically, departments should:

Limit shift lengths. Establishing maximum shift lengths for officers enhances wellbeing.³⁸ Research shows that long shifts undermine mental and physical wellbeing, especially when they occur in high-risk or high-stress environments.³⁹

Maximum shift lengths should be set in tandem with daily limits on work hours. For example, an officer who works an eight-hour night shift and then spends the day in court should not return for a subsequent shift. Department leaders should meet their staffing needs while limiting the number of hours officers are required, or allowed, to work within a set period. One option is to fill positions that do not need to be staffed by sworn officers with civilian personnel.

Ensure vehicle safety. Traffic accidents are the second leading cause of officer fatalities in the line of duty (after the use of firearms).⁴⁰ To prevent vehicular death and injury, all officers should be required to wear seat belts and participate in vehicle safety training.⁴¹ This training should cover policies regarding vehicle pursuits,⁴² such as how to weigh the risks of pursuits and how to manage and/or terminate them to protect public and officer safety.⁴³

RECOMMENDATION 12.6

ESTABLISH POST-CRISIS EVALUATION AND TREATMENT PROTOCOLS.

Departments should have clear policies and protocols for treating officers during and after crises. All officers who are involved in or witness a crisis or traumatic event should undergo a mandatory screening with a health professional, such as an EAP counselor.⁴⁴ This policy should apply not only to officer-involved shootings but to all crises and traumatic events. Officers should also have the option to access crisis counseling.

Supervisors should monitor changes in officers' demeanor and behavior after traumatic events. Departments should have formal and informal intervention processes, as well as comprehensive nondisciplinary early intervention systems, to identify officers who may be in crisis or experiencing personal or professional difficulties. (For more detail, see Chapter 7.)

Supporting and treating officers who have experienced trauma is a public safety interest.

RECOMMENDATION 12.7

PROVIDE OFFICERS WITH APPROPRIATE EQUIPMENT.

All departments, large and small, need equipment so officers can police safely and effectively. Inadequate and outdated equipment endangers public and officer safety and increases stress. Department leaders should establish processes to evaluate equipment needs (e.g., protective gear, body-worn cameras, vehicle safety, first-aid kits, and computer terminals) on an ongoing basis. Budget officials should meet various community needs, but they should ensure that all officers have certain equipment so they can serve the community safely and effectively and protect their own safety. Specifically, departments should:

Equip officers with on-duty aid kits. All officers need their own first aid kits, which should include items to stem blood loss. All officers should also receive in-service training throughout their careers on proper techniques for rendering aid in the field.⁴⁵

Provide protective gear. Policing is dangerous and complex work. Officers should be required to wear bulletproof vests in appropriate circumstances.⁴⁶ While officers may find protective gear cumbersome, it saves lives and alleviates stress because officers know they will be protected in emergencies.⁴⁷

Supply adequate computers. Departments should collect and report data on enforcement activities accurately and efficiently. (For more detail, see Chapter 8.) To carry out this task, officers need properly functioning computers. Otherwise, department leaders send the message that they do not support officers in their job duties, which increases job-related stress and lowers morale.

New Era of Public Safety: A Guide to Fair, Safe, and Effective Community Policing © 2019

New Era of Public Safety is a product of The Leadership Conference Education Fund, the education and research arm of The Leadership Conference on Civil and Human Rights, and was supported by the Google.org.

The Leadership Conference on Civil and Human Rights is a coalition charged by its diverse membership of more than 200 national organizations to promote and protect the civil and human rights of all people in the United States. Through advocacy and outreach to targeted constituencies, The Leadership Conference works toward the goal of a more open and just society — an America as good as its ideals.

The Leadership Conference is a 501(c)(4) organization that engages in legislative advocacy. It was founded in 1950 and has coordinated national lobbying efforts on behalf of every major civil rights law since 1957.

The Leadership Education Fund is a 501(c)(3) organization that builds public will for laws and policies that promote and protect civil and human rights of every person in the United States. The issues the Education Fund works on have deep roots in its organizational history and across the communities it represents.
